

# Protocol list

## **Transport techniques for cells**

- Transport assays for adherent monolayers of cultured cells 3
- Transport assays on suspended cells using the oil-stop or inhibitor oil-stop technique 6

## **Plasma membrane vesicles and transport**

- Preparation of intestinal brush-border membrane vesicles 9
- Transport by membrane vesicles determined by rapid filtration 10

## **Determination of the driving forces for symporters—ion gradients and membrane potential**

- Determination of the intracellular pH in suspended cells 18

## **Purification of the Ca<sup>2+</sup>-ATPase from skeletal muscle sarcoplasmic reticulum**

- Preparation of sarcoplasmic reticulum 25
- Purification of the Ca<sup>2+</sup>-ATPase from sarcoplasmic reticulum 28

## **ATPase assay**

- Assay of ATPase activity 29

## **Reconstitution of the Ca<sup>2+</sup>-ATPase**

- Reconstitution of the Ca<sup>2+</sup>-ATPase into membrane fragments 31
- Reconstitution into pre-formed large unilamellar vesicles (LUVs) 36
- Reconstitution into sealed vesicles using cholate and deoxycholate 38

## **Spectrophotometric assay of Ca<sup>2+</sup> accumulation**

- Spectrophotometric determination of Ca<sup>2+</sup> accumulation 40

## **Simulation of Ca<sup>2+</sup> accumulation**

- The subroutine necessary for simulation of Ca accumulation using FACSIMILE 43

## **The *Xenopus* oocyte system**

- Isolation of Stages V–VI oocytes 49
- Microinjection procedure 52

## **Isolation and size-fractionation of poly(A)<sup>+</sup> RNA (mRNA) from mammalian tissues**

- Isolation of total RNA by the guanidinium thiocyanate and CsCl method 54
- Isolation of poly(A)<sup>+</sup> RNA by oligo(dT)-cellulose affinity chromatography 55
- Size-fractionation of poly(A)<sup>+</sup> RNA 56
- Preparation of plasmid cDNA libraries suitable for *in vitro* transcription of RNA and expression in *Xenopus* oocytes 59
- Denaturing agarose gel electrophoresis 59

## PROTOCOL LIST

### **Functional and molecular characterization of transporter-encoding cDNAs**

- Subcloning a cDNA into the vector pSP64T 64
- Radiotracer flux assay 65
- Isolation of total oocyte membranes 72
- Western blot analysis 73

### **Expression in *Saccharomyces cerevisiae***

- Media for *Saccharomyces cerevisiae* 82
- Transformation of *Saccharomyces cerevisiae* 89
- Small-scale isolation of yeast total membranes 92
- Uptake experiment with a radiolabelled substrate 93
- Large-scale preparation of yeast total and plasma membranes 95
- Purification of biotinylated proteins with immobilized avidin 97

### **Expression in *Schizosaccharomyces pombe***

- Transformation of *Schizosaccharomyces pombe* 100

### **Practical aspects of the expression procedure**

- Monolayer culture of insect cells 119
- Suspension culture of Sf9 cells 120
- Storage and resuscitation of insect cells 121
- Transposition of recombinant genes into bacmid DNA 125
- Isolation of recombinant bacmid DNA 126
- Transfection and co-transfection of insect cells with baculovirus DNA using liposomal transfection reagents 128
- Co-transfection of insect cells using calcium phosphate 129
- Measurement of viral titre, and purification of recombinants, by plaque assay 131
- Estimation of viral titre by cell-lysis assay 133
- Amplification and storage of recombinant baculovirus 134
- Measurement of solute transport into insect cells 136
- Preparation of insect cell membranes 137

### **Growth conditions and detection of amplified membrane transport protein expression in *Escherichia coli***

- Batch culture of recombinant *E. coli* for the overexpression of membrane proteins 145
- Preparation of *E. coli* mixed membranes using water lysis 148
- Separation of the inner and outer bacterial membrane fractions 149

### **Detergent choice and solubilization of integral membrane proteins**

- Solubilization of bacterial membranes containing (His)<sub>6</sub>-tagged protein 152

### **Purification of (His)<sub>6</sub>-tagged proteins**

- Purification of (His)<sub>6</sub>-tagged protein using Ni-NTA agarose affinity chromatography 154

### **Reconstitution and activity assays of purified membrane protein**

- Reconstitution of detergent-solubilized membrane proteins into *E. coli* liposomes by detergent dilution 155
- Reconstitution of membrane protein using Bio-Beads 156
- Counterflow assay for activity of reconstituted GalP(His)<sub>6</sub> protein 157

### **Physical properties of purified membrane protein**

- Circular dichroism (CD) spectroscopy of reconstituted and detergent-solubilized membrane protein 161

Fourier-transform infrared (FTIR) spectroscopy of proteoliposomes 162  
 Preparation of solubilized membrane protein for mass spectrometry 163

**Equilibrium studies of ligand binding to membrane transporters**

Titration of GalP with forskolin 171

**The kinetics of ligand binding and translocation**

Stopped-flow mixing experiments 175

**A steady-state approach to determining rate constants governing the translocation cycle**

Determination of the temperature dependence of the steady-state parameters for cellular transport 187

**Photoactivation methods**

Photolabelling glucose transporters with [<sup>3</sup>H]cytochalasin B 196

Photolabelling glucose transporters using [<sup>3</sup>H]ATB-BMPA 198

**Detection of the covalent incorporation of photolabels into glucose transporter isoforms**

Immunoprecipitation of the photolabelled glucose transporter isoforms 201

Solubilization of gels crosslinked with bis-acrylamide 203

**Biotinylated photolabels**

Detection of biotinylated GLUT4 using streptavidin precipitation 205

Detection of biotinylated GLUT4 by immunoprecipitation and detection with Amdex™ streptavidin-HRP 206

**Example—*B. subtilis* ABC transporters**

Protein sequence analysis 218

Prediction of transmembrane helices 221

Residue periodicity analysis 223

**Two-dimensional crystallization of membrane proteins**

Preparation of lipid stock solution in detergent-containing buffer 237

Exchange of detergent using a Centricon concentrator device 242

Exchange of detergent using size-exclusion gel filtration on Sephadex G-200 242

Exchange of detergent using sucrose-gradient centrifugation 243

Free (monomeric) detergent concentration measurement using the falling-drop weight method 244

Determination of the free detergent concentration using the sitting-drop method 245

Determination of phospholipid with ammonium ferrothiocyanate 246

Determination of phospholipid by phosphate content 247

Enzymatic determination of choline-containing phospholipids 247

Bicinchoninic acid (BCA) protein assay 248

Tubular crystallization of photosystem-II core complex (PSII) using dilution 251

Pre-treatment of the dialysis membranes 253

Microdialysis set-up using Eppendorf tubes 254

2-D crystallization procedure using Bio-Beads SM2 256

Phospholipase A2 treatment of 2-D crystals 257

**Analysis of the result of 2-D crystallization by electron microscopy**

Preparation of carbon-parlodion composite films on copper grids 259

Negative staining 259

Correlation averaging of OmpC 2-D crystals 263

## PROTOCOL LIST

### **Three-dimensional crystallization of membrane proteins**

Purification of *Rps. acidophila* 10050 LH2 275

Detergent exchange by ultrafiltration in *Rps. acidophila* 10050 LH2 276

Crystallization of *Rps. acidophila* 10050 LH2 in  $\beta$ -OG 277

Purification of RC from purple photosynthetic bacteria 280

Crystallization of trigonal crystals 283

### **Preparing crystals for data collection**

Preparation of 'artificial mother liquor' 296

Equilibration of *Rps. acidophila* 10050 LH2 crystals prior to cryocooled data collection 297
