

OXFORD ORNITHOLOGY SERIES

Series Editor: **T.R. Birkhead**, University of Sheffield, UK

The Oxford Ornithology Series publishes the best of academic research in avian biology. Topics in the series to date include migration, mating systems, and parasitism.

Ptilochronology

Feather time and the biology of birds

Thomas C. Grubb, Jr., The Ohio State University, Columbus

Oxford Ornithology Series

2006 | 192 pages

978-0-19-929550-0, HARDBACK

£59.95/\$110.00

Avian Flight

John J. Videler, Groningen University and Leiden University, The Netherlands

'...this is an expertly written introduction into all aspects of bird flight. What makes it even better is that Videler's narrative emphasis is not so much on the mechanical minutiae of avian flight, but rather on explaining and describing what makes it all work...His writing style, moreover, is enthusiastic and colourful.'

PalArch's Journal of Vertebrate Palaeontology

Oxford Ornithology Series

2006 | 288 pages

NEW FOR 2009

Ecology and Evolution of Introduced Birds

Tim Blackburn, Institute of Zoology, UK, **Julie Lockwood**, Rutgers University, USA, and **Phillip Cassey**, University of Birmingham, UK

This volume summarizes and synthesizes the literature on introduced birds, incorporating the study of biological invasions, avian conservation biology, and basic principles of ecology and evolution.

Oxford Ornithology Series

June 2009 | 288 pages

978-0-19-923255-0, PAPERBACK

BIRD FAMILIES OF THE WORLD

Bird Families of the World is a multivolume series of handbooks, intended to serve the interests of both the professional scientist and the ever-growing body of amateur ornithologists. Each volume will provide a comprehensive and accurate synthesis of our knowledge of one bird family or several related families.

Pelicans, Cormorants, and Their Relatives

Pelecanidae, Sulidae, Phalacrocoracidae, Anhingidae, Fregatidae, Phaethontidae

J. Bryan Nelson, MBE, Reader Emeritus, Department of Zoology, University of Aberdeen, UK

'...marine ornithologists will want to consult it to find out more about a fascinating group of birds...'

IBIS

2006 | 680 pages

978-0-19-857727-0, HARDBACK

£110.00/\$199.00

Hérons

James A. Kushlan and **James A. Hancock**

'His scholarly material... is elegantly written and enlivened but interesting anecdotes.'

Nicholas Harman, *The Spectator*

2005 | 456 pages

978-0-19-854981-9, HARDBACK

£110.00/\$225.00

The Bowerbirds

Ptilonorhynchidae

Clifford Frith and **Dawn Frith**, both at Queensland Museum, Brisbane, Australia

'For the time being, this is the definitive account of bowerbird biology, but it will be a fitting tribute to the Frith's ability to inspire future generations of bowerbird biologists if their excellent book soon requires a new edition.'

Ibis

2004 | 538 pages

978-0-19-854844-7, HARDBACK

£110.00/\$252.00

**Ducks, Geese, and Swans**

Janet Kear, Formerly Director, The Wildfowl and Wetlands Trust

2005 | 832 pages

978-0-19-854645-0, HARDBACK

£165.00/\$384.00

The Cuckoos

Robert B. Payne, University of Michigan, USA

'...illustrated to a very high standard. The text is both informative and easy to read as it uses a slightly larger font size than in some handbooks.'

Scottish Bird Review

'In summary, *The Cuckoos* is a good review text of this fascinating group of birds that will serve as a reference text for many years to come. The strength of this book lies in the equal treatment of all cuckoo species whether they lay eggs in their own nests or in those of another species.'

THE HANDBOOK OF AUSTRALIAN, NEW ZEALAND AND ANTARCTIC BIRDS

The Handbook of Australian, New Zealand and Antarctic Birds (HANZAB) is one of the most exciting and significant projects in Australian ornithology today. Providing an up-to-date, comprehensive, and accurate synthesis of our knowledge of all the birds that occur in the region, HANZAB continues a long tradition of authoritative and exciting ornithological publications, that began with Gould's Handbook of the Birds of Australia (1865) and was continued by Mathews, Buller and Oliver.

**Handbook of Australian, New Zealand and Antarctic Birds**

The History of British Birds

Derek Yalden,
University of
Manchester, UK, and
Umberto Albarella,
University of Sheffield,
UK

The History of British Birds reviews our knowledge of avifaunal history over the last 15,000 years, setting it in its wider historical and European context. The authors, one an ornithologist the other an archaeologist, integrate a wealth of archaeological data to illuminate and enliven the story, indicating the extent to which climatic, agricultural, and social changes have affected the avifauna. They discuss its present balance, as well as predicting possible future changes.

Polar Lakes and Rivers*Limnology of Arctic and Antarctic Aquatic Ecosystems*

Edited by **Warwick F. Vincent**, Laval University, Quebec, Canada, and
Johanna Laybourn-Parry, University of Tasmania, Australia

This is the first book to describe the ecology of high latitude lakes, rivers and glacial environments in both the North and South polar regions. From the lake-rich floodplains of the Arctic to the deep, enigmatic waters of Lake Vostok, Antarctica, these regions contain some of the most extraordinary aquatic ecosystems on Earth. They provide a fascinating diversity of habitats for plant, animal and microbial communities, and are proving to be valuable model systems for exploring many ecological themes including landscape-lake interactions, adaptation of life to environmental extremes, and controls on the structure and functioning of aquatic ecosystems. Some of these waters also have direct global implications, including permafrost thaw lakes as sources of greenhouse gases, subglacial aquatic environments as a storehouse of ancient microbes, and Arctic rivers as major inputs of freshwater and organic carbon to the World Ocean. Given that many polar areas are experiencing greater climate warming than at lower latitudes, these ecosystems can also be viewed as sentinels of global change.

and **Ulrich Sommer**, Kiel
University, Germany

'...an excellent text that I
would not hesitate to use
for teaching courses in
ecology and limnology...
Lampert and Sommer's
updated *Limnology* will
make an excellent resource

for students of aquatic ecology at all stages. I have
often handed the first edition to my starting graduate
students to read. Now I have an updated version
that will be even more useful.'

Limnology and Oceanography Bulletin

This concise, readable introduction to limnology (the science of investigating the structure and function of inland waters) places the subject in the context of modern ecology. Unlike most ecological textbooks, which use examples taken almost exclusively from terrestrial systems, this book integrates the fields of limnology and ecology by presenting empirical data drawn entirely from freshwater ecosystems in order to advance ecological theories (limnoecology).

Marine Mammal Ecology and Conservation*A Handbook of Techniques*

Edited by **Ian L. Boyd**,
University of St
Andrews, UK, **W. Don**

Bowen, Bedford
Institute of Oceanography, Canada, and
Sara J. Iverson, Dalhousie University, Canada

Much of our knowledge about marine mammals is derived from a long-term and dedicated research effort that is evolving rapidly due to the introduction and invention of new methods. This book reflects the inventiveness of marine researchers as they try to find ways around the problems presented to them by these unusual and challenging animals.
