

### The Oxford Handbook of Climate Change and Society

Edited by **John S. Dryzek**, Australian Research Council Federation Fellow and Professor of Political Science, Australian National University, **Richard B. Norgaard**, Professor of Energy and Resources, University of California, Berkeley, and **David Schlosberg**, Professor of Government and International Relations, University of Sydney

- A major analysis of a key global issue
- Broad-ranging treatment of fast-growing field
- Outstanding range of contributors
- Multidisciplinary in approach
- Essential reference for students and scholars in this field

A systematic examination by the best writers in a variety of fields working on issues of how climate change affects society, and how social, economic, and political systems can, do, and should respond.

### Climate Change Law and Policy

EU and US Approaches

**Cinnamon P. Carlarne**, Assistant Professor, University of South Carolina, School of Law & School of the Environment

This book provides a comparative, socio-legal analysis of global climate change laws and policies in the European Union and the United States, shedding light on the disparate legal and political strategies being used to address climate change in these two regions and the likely successes and failures of current policy strategies.

### NEW IN PAPERBACK

### Down to the Wire Confronting Climate Collapse

**David W. Orr**, Professor of Environmental Studies and Politics, Oberlin College

*Down to the Wire* offers an exacting analysis of where we are in terms of climate change, how we got here, and what we must now do. It shows how political negligence, an economy based on the insatiable consumption of trivial goods, and a disdain for the well-being of future generations have brought us to the tipping point. *Down to the Wire* is a major wake-up call. But this is not a doomsday book. Orr offers a wide range of pragmatic, far-reaching proposals—some of which have already been adopted by the Obama administration—for how we might reconnect public policy with rigorous science, bring our economy into alignment with ecological realities, and begin to regard ourselves as planetary trustees for future generations.

### Climate Change, Forced Migration, and International Law

**Jane McAdam**, Associate Professor, Faculty of Law, University of New South Wales, Australia

This is a key study into whether 'climate change refugees' are protected by international law. It examines the reasons why people do or do not move; how far climate change is a trigger for movement; and whether traditional international responses, such as creating new treaties and new institutions, are appropriate solutions in this context.

### A Perfect Moral Storm

The Ethical Tragedy of Climate Change

**Stephen M. Gardiner**, Associate Professor, Department of Philosophy and Program on Values in Society, University of Washington, Seattle

Climate change is a global problem that is predominantly an intergenerational conflict, and which takes place in a setting where our ethical impulses are weak. This 'perfect moral storm' poses a profound challenge to humanity. This book explains how the 'perfect storm' metaphor makes sense of our current malaise, and why a better ethics can help us see our way out.

## Energy Networks and the Law

### Innovative Solutions in Changing Markets

Edited by **Martha M. Roggenkamp**, Groningen Centre of Energy Law, University of Groningen, **Lila Barrera-Hernández**, Faculty of Law, University of Calgary, **Donald N. Zillman**, University of Maine at Presque Isle and University of Maine Law School, and **Iñigo del Guayo**, University of Almería

Networks like cables and pipelines are essential for a functioning energy market. This book provides a clear and insightful overview of the legal challenges this poses in the modern world. The construction and use of these networks depends on developments in technology, policies, and laws. Recently, the energy sector has been faced with considerable challenges and changes. Energy liberalisation and deregulation, and the fact that traditional energy supplies like fossil fuels and large hydro plants are increasingly located far from the area of demand, has drastically changed the energy landscape. The need for new sources of energy supply can therefore be found all over the world.

Most jurisdictions focus on renewing and/or redesigning their energy networks to combat this problem. These networks are facing ever-increasing demands on their supply. This book investigates the challenges that face governments engaged in this renewal, particularly since in many cases these networks are, by necessity, international. The construction of new networks always involves the application of planning and environmental laws, and the complications these pose only increase as networks pass through the territory of several different countries. This book analyzes the evolution of this area from several angles, both geographical and legal. The authors combine knowledge and expertise from a variety of sources and backgrounds to present an invaluable overview of the regulatory developments and perspectives that shape the legal frameworks in which governments develop these networks, and the way in which account must be taken of these new sources of energy by the law-makers.
