

## The Evolution of Morphology

Andrew Carstairs-McCarthy, University of Canterbury, New Zealand

This book considers the evolution of the grammatical structure of words in the contexts of human evolution and the origins of language. The author challenges the conventional views of the relationship between syntax and morphology, the adaptationist view of language evolution, and the notion that language in some way reflects 'laws of form'.

## The Prehistory of Language

Edited by Rudolf Botha, University of Stellenbosch, and Chris Knight, University of East London

suitable as a student text

Prominent linguists, cognitive scientists, archaeologists, primatologists, anthropologists, and natural scientists examine issues and advances in understanding language evolution, ranging from the co-evolution of language and music to the evolutionary biology of language. This book is an important and stylish

contribution to a fascinating area of research.

## The Origin of Speech

Peter MacNeilage, University of Texas at Austin

This important and original account of the origin and evolution of speech integrates the latest research in speech, acquisition, and neurobiology, and includes the key observation that infants learning language reveal similar constraints to those acting on our distant

ancestors. It is written in a clear style with minimal recourse to jargon.

## The Cradle of Language

Edited by Rudolf Botha, University of Stellenbosch, and Chris Knight, University of East London

suitable as a student text

This book is the first to focus on the African origins of human language. It explores the origins of language and culture 250,000–150,000 years ago when modern humans evolved in Africa. Internationally renowned scholars address the fossil, genetic, and archaeological evidence and critically examine the ways it has been interpreted.
