

Macroeconomics

Imperfections, Institutions, and Policies

Wendy Carlin, Professor of Economics, University College London, and David Soskice, Research Professor of Political Science, Duke University and Wissenschaftszentrum Berlin

- Provides comprehensive coverage of aggregate demand and supply within an integrated model fully incorporating open economy aspects.
- Offers a rigorous, yet accessible, treatment of growth theory and debates about convergence. Shows how a simplified version of the Schumpeterian growth model works and how it can be used to address a rich variety of questions about growth and institutions.

Macroeconomics makes modern macroeconomics, with its focus on imperfect competition, interest-rate setting central banks, and knowledge-based growth, accessible to undergraduates. It provides micro-foundations for the Philips curve, for persistent involuntary unemployment, for aggregate consumption and investment behaviour, and for inflation-targeting. It is based on the mainstream monetary macro model now used widely by academics and policy makers and shows students how to use it to understand a broad range of real-world macroeconomic behaviour and policy issues. It is also designed to appeal to graduate students, non-specialists in macroeconomics, professional economists and those from related disciplines who want a guide to the complexities of modern macroeconomics and to understand contemporary policy debates.

At last, an advanced undergraduate book which maps theory to facts. The theory, from the new Keynesian model of fluctuations to Schumpeterian models of growth, is sound. The applications, from European unemployment to the Japanese slump, highly revealing. You will enjoy every chapter, and become a good macroeconomist in the process.

The Japanese Economy

Second Edition

David Flath, North Carolina State University

Conventionally, Japan is presented as the exception to mainstream economic theory: an exception to the standard models of modern economics. This book demolishes that notion, bringing the full analytical power of economic thought to all aspects of the most dramatic economic success story in recent times.

The Foundations of Modern Macroeconomics

Ben J. Heijdra, University of Groningen, The Netherlands, and Frederick van der Ploeg, State Secretary for Education, Culture & Sciences, The Netherlands

Advanced macroeconomics can seem a daunting prospect. Complex and poorly defined, infected with a variety of conflicting approaches, it is difficult for the student to get an overall picture of what there is and how it fits in. *Foundations of Modern Macroeconomics* is aimed at getting round this fundamental problem.
